SKILLS

- **Quality Optimization:** Establishing strict code review standards, implementing full-stack type-safety, refactoring legacy architectures, and mentoring developers on clean-code best practices.
- **Queue & Performance Maintenance:** Engineering stable background job processing, handling multi-tenant database scaling, and reducing server bottlenecks for live production systems.
- **Project Delivery & Go-Live:** End-to-end release management, production deployment strategies, cross-functional team alignment, and agile milestone delivery.

LANGUAGES

- PHP
- JavaScript
- Java
- Node.js
- TypeScript
- HTML/CSS

FW, LIB & DB

- Laravel
- Vue/Nuxt.js
- React/Next.js
- Express.js
- NestJS
- Spring Boot
- Spring MVC
- JUnit
- Hibernate
- Swagger
- Scribe API Doc
- REST
- GraphQL
- MySQL
- PostgreSQL

DevOps

- AWS
- Docker
- Git
- Apache/Nginx
- CI/CD

Communication

- Conversational English
- JLPT-N3 (passed)

EXPERIENCES IN

- Enterprise HRIS Platform
- Electronic Complaint Management System
- Disaster Management System Online
- Learning Platform
- Event Management System
- Event Booking System
- E-Commerce
- Point of Sales
- LINE, Google Calendar Integration
- Project Management System
- Marketing Automation Integration
- Microservice

WORKS WITH

Senior Software Engineer / Lead Engineer [October 2023 - present] (Hybrid)

Onenex from Yoma Strategic Holdings Ltd.

Enterprise HRIS Platform (Refactoring & Modernization)

- **Context & Scale:** Multi-company HRIS handling attendance, leave, payroll, and overtime with strict compliance for local payroll regulations (NRC, SSB, tax claims). Scaled the platform to support 36+ companies and 10,000+ monthly payroll runs, dramatically optimizing performance to drop dashboard load times from 45s to 500ms and query times from 10s to 50ms.
- **Tech Stack:** Laravel 13, Vue 3, Node.js, TypeScript, TanStack Query, Temporal, PostgreSQL, Redis, AWS, Docker.
- **Key Achievements:**
 - Led the complete overhaul and modernization of an outdated, high-maintenance legacy system into a fast, automated HR SuperApp, eliminating deep technical debt across corporate branches.
 - Architected clean Laravel REST APIs using Domain-Driven Design (DDD), implementing strict full-stack type-safety using Spatie Data DTOs to automatically generate TypeScript contracts for the frontend and mobile clients.
 - Integrated Temporal workflow workers to run heavy async operations reliably, automating complex leave cycle resets, bulk data imports/exports, scheduled data regenerations, and payroll runs to slash manual administrative overhead.
 - Designed dynamic approval workflows, automated notifications, and multi-auth systems supporting OTP, biometric, Azure AD, Microsoft, and dedicated device logins for mobile and kiosk users.
 - Optimized dashboard performance and database queries using advanced indexing and Redis caching to render high-density monthly relational metrics—such as hires, terminations, and daily attendance—in real-time.

● *HR Admin Platform (Multi-Company Workforce Management)*

- **Context & Scale:** Earlier version of the enterprise HR admin platform managing workforce metrics, policy engines, and internal communications in a unified web workspace.
- **Tech Stack:** Laravel, Nuxt.js (Vue 2), Apollo GraphQL, REST API, Laravel Queue Horizon, MySQL.
- **Key Achievements:**
 - Maintained and refactored the core workforce platform, managing the data pipelines that served both web applications and integrated iOS/Android mobile clients via a combined GraphQL and REST API layer.
 - Built a highly flexible, policy-driven leave engine that automated pro-rata accruals, rollovers, automated approvals, and complex employee balance checks.
 - Engineered a reliable background job processing pipeline using Laravel Queue Horizon to handle asynchronous tasks, notifications, and massive bulk data imports/exports without hitting server bottlenecks.
 - Developed a secure, multi-tenant permission system structured strictly around roles and modules, giving company administrators precise control over employee, leave, and compliance configuration spaces.
 - Implemented automated file and storage processing pipelines by integrating AWS S3 to process, isolate, and safely store employee documents and assets across the digital onboarding lifecycle.

● *Software House Marketing & Client Portal (Freelance Projects)*

Lead Full-Stack Developer

- **Context & Scale:** Designed and engineered a mobile-first, highly responsive web application combining an agency marketing platform with an interactive client-engagement portal. Built to showcase portfolio work, manage partner relationships, and streamline the inbound customer acquisition funnel.
- **Tech Stack:** Next.js, React, TypeScript, Tailwind CSS, Mobile-First Responsive Design.
- **Key Achievements:**
 - Architected a high-performance frontend using Next.js and TypeScript, ensuring ultra-fast page load times, clean code organization, and excellent SEO optimization for the public marketing site.
 - Engineered a seamless, interactive project showcase module to dynamically present previous works, case studies, partner logos, and team profiles across all device sizes.
 - Designed and developed an automated client contact flow, enabling prospective customers to submit project inquiries directly to the team and streamlining the client onboarding funnel.

- Implemented a strict mobile-first responsive design strategy, ensuring fluid layouts, optimized asset delivery, and an intuitive user experience across both mobile browsers and desktop screens.

Personal Engineer Portfolio Website

- **Context & Scale:** Designed and engineered a highly interactive, production-ready developer portfolio and case-study platform. Built with a unique terminal-inspired aesthetic to showcase engineering history, core skill graphs, and active project timelines in a clean, scannable workspace.
- **Tech Stack:** Next.js, React, TypeScript, Tailwind CSS, Zustand, Resend for mail server.

Full Stack Developer / Team Lead [October 2017 - October 2023] (On-site)

METATEAM MYANMAR Co.,Ltd [Seattle Consulting Myanmar]

Event Booking & Management System

Tech Stack

- Laravel for user view
- Zend for admin panel
- blade, smarty template and jQuery for frontend
- MSSQL for database
- Docker for deployment and development
- Microservice
- Google Calendar and marketing automation integration

Project specialized in event creation and visitor tracking systems. Also contains the event management, visitor registration, send notifications when due, and data exports.

Online Learning Platform

Tech Stack

- Phalcon for user view
- Wordpress for admin panel
- Line Integration

Interactive education web app for grade-based book learning. Users can report, comment, and rate books. Achievements, goals, and rewards included gamification.

BroadBand Complaint Management System

Tech Stack

- Zend
- Oracle
- Handsontable for gantt chart

Developed electronic schedule system for Construction Machinery sales offices. Implemented functions for process management, front desk, and rental status using Gantt Chart. Ensured compatibility with complex requirements and across different browsers.

● ***E-Commerce Microservice***

Tech Stack

- Laravel
- MySQL

Management of Clusters databases. Provide API from Master Database to Slave DB, master are deployed on AWS using Laravel API of microservices.

● ***Point Of Sales***

Tech Stack

- Laravel
- PostgreSQL
- AdminLTE

Point of Sale System (selling products at shop including Stock control)

● ***Disaster Management System***

Tech Stack

- Laravel
- VueJS
- PostgreSQL

Developed a National Disaster Management System to record and report damage assessments of buildings and belongings during disasters. The system also facilitates tracking of affected individuals and provides support for relief and resettlement efforts.

● ***E-Commerce Backend***

Tech Stack

- SpringBoot
- JUnit
- Swagger
- Doma2

Created e-commerce website with diverse products. Admin can manage items, while users can order, pay by card/cash, and get home delivery. Implemented features for order processing, product details, and delivery management. Additionally, facilitated export of items' information between customers and admin.

● **Employee Management System**

Tech Stack

- SpringMVC
- MySQL

Developed Payroll and Employee Management System

Education

B.C.Sc Computer Science / University Of Computer Studies(Yangon)

ABOUT ME

Senior Full-Stack Software Engineer with nearly 9 years of experience engineering high-performance web applications, microservices, and enterprise ecosystems for major corporate groups and international clients. Deeply proficient across the full lifecycle—from legacy system refactoring and secure backend API development (Laravel, Node.js, Spring Boot) to building automated, type-safe frontend architectures (Vue.js, Next.js, TypeScript). Proven track record of leading development teams, driving engineering best practices, and delivering scalable solutions that significantly reduce administrative overhead and technical debt.
